Week 4: PM Software

I have decided to pick Monday as my project management software. They offer a free version for teams of up to 2 and it seems to have a great user interface. I was able to briefly setup and outline my project tasks and a timeline in under ten minutes. They also offer a mobile application with both the desktop and mobile versions providing updates and notifications.

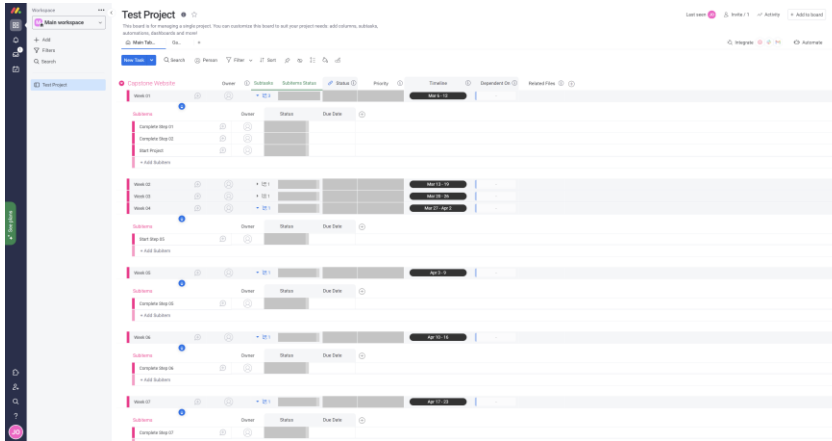

As of right now this pm software seems to be checking all my needs, they also have an extension marketplace for customizing each project which seems nicely organized. One downside is that billing for paid memberships are what seems to be per user, I am not familiar with this billing model myself.

I have included screenshots of important features and some resources below.

Screenshots:

Software:

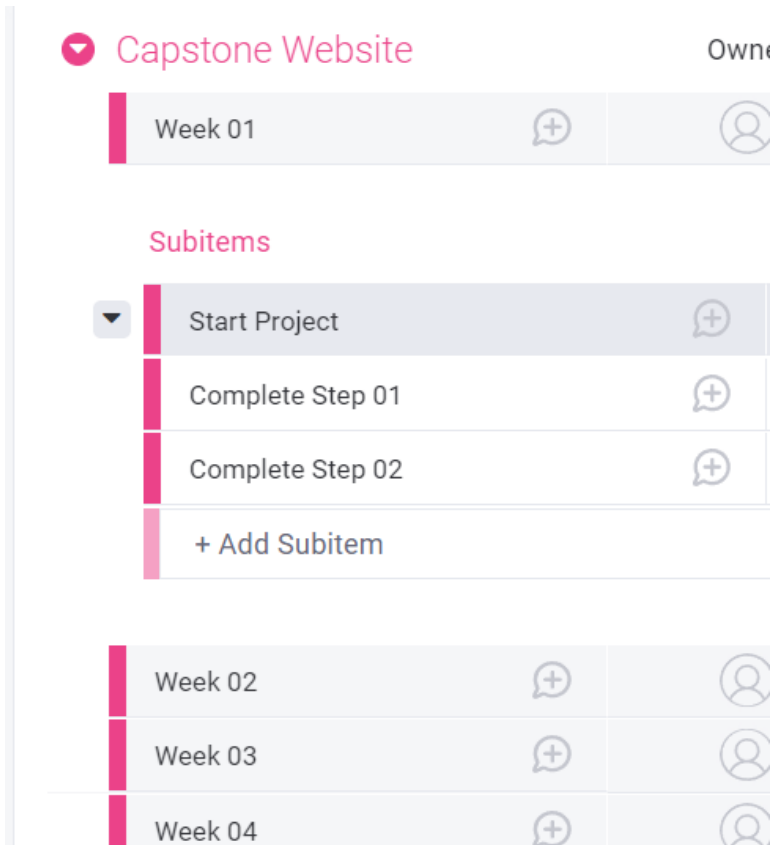

Using Monday. Com here is browser view, there is an app available.

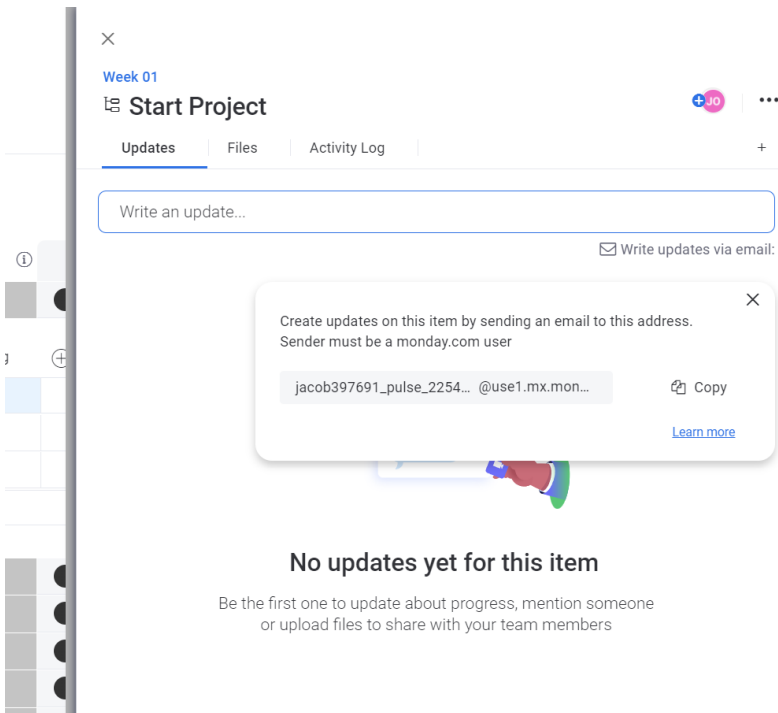

Track due dates and time tracking:

Subitems	Owner	Status	Due Date	Time Tracking	
Start Project			Feb 6		0m 2s
Complete Step 01					
Complete Step 02					
+ Add Subitem					

Track and organize tasks:

Note taking, reports per task and email updates if member of monday:
